

PROJECT STATUS REPORT

Project Title/Sponsor: AI Medical File Analysis and Recommendations / InComm

Project Manager: Dr. Nazmus Sakib, Director, mHealth Research Lab, and Assistant Professor of Information Technology

Date of Report: September 14, 2026

Reporting Period: September 1 – 14, 2026

Milestone	Status (not started, in progress, completed)	Expected Completion Date	Issues Exist? Y/N
Milestone 5 — Member Impact Scoring (follow-up analyses)	completed	September 9, 2026	N
Milestone 6 — Reward Uplift / Elasticity	completed	September 14, 2026	Y
Milestone 7 — Claims ROI	not started	October 15, 2026	Y

Accomplished this period

- Completed Milestone 5 follow-up analyses for the Model A review: imbalance (40.5% closed), missingness, never-rewarded cold start (0% closure in that test slice), grouped split, and AUC stability (seeds 42, 123, 456, 789, 2026). Full-feature AUC ~0.94; ~0.75 without reward features.
- Completed Milestone 6. On the live extract, reward-eligible equals Closed and IncentiveRewards is not present, so native assignment cannot identify lift. Built the dated-issuance pipeline on a research-generated IncentiveRewards-shaped ledger (real members, gaps, catalog \$15–\$30).
- Track R mock CATE identified as a negative control (90-day close 2.19% treated vs 2.25% control). Elasticity not available (catalog default per gap). Seven PDFs packaged for Daniel. Scores tagged research-generated mock; not for claims ROI.

Planned actions for next period

- Load a named IncentiveRewards / dated gap-level issuance export into the existing Track R schema when InComm can provide it; retag as InComm-issued.
- Start Milestone 7 claims ROI only on InComm-issued Track R scores. Support DBA review of proposed der_MemberRewardUpliftScores if requested.

Issue Description	Action Steps
IncentiveRewards (production issuance/redemption) is not in the current extract. IsRewardEligible iff Closed, so HAR/sim rows are not causal treatment. Milestone 7 is blocked on a named dated ledger.	InComm to name or export dated gap-level issuance (member, care gap, issued_at, amount, redeemed). Team will load it into the existing Track R adapter. Mock scores will not be used for ROI.
Issued amount does not vary within a care gap (catalog default only, \$15–\$30 across gaps).	Do not estimate dP(close)/d\$ until production amounts vary within gap. Elasticity remains not available.

Invoice Number	Amount	Date Sent	Date Received
CAC001	\$15,000.00	01/14/2026	04/09/2026
CAC007	\$15,000.00	07/24/2026	08/24/2026
